

HEALTHY BODY.

HEALTHY BRAIN.

It is normal for your brain to change as you get older. Regular physical activity can have many benefits for health, including lowering your risk for memory loss and confusion. It can:

- Help you think better
- Improve your sleep quality and help you to fall asleep faster
- Improve your feelings of well-being
- Reduce symptoms of anxiety and depression
- Lower your risk of Alzheimer's disease and related dementias

All forms and amounts of physical activity are helpful for the health of older adults. For maximum health benefits, older adults should do all three of these activities:

AT LEAST 150 MINUTES A WEEK

Something that gets your heart pumping like walking briskly or dancing

AT LEAST TWO DAYS A WEEK

Something that builds muscle like gardening or using exercise bands

Something to improve balance like walking heel to toe or standing on one foot
