**The longer your baby is breastfed, the greater the benefit.**

# Get breastfeeding off to a great start:

You have it all! Your body can make all the milk your baby needs.

Breastfeed often. Feeding cues include baby's hands at his mouth, smacking his lips, moving his head side to side, and stretching. Crying is a late sign of hunger.

Baby's mouth should be wide open while feeding. Listen for swallowing (no clicking or smacking noises) as a sign your baby is feeding well.

What goes in must come out. Look for at least 3 bowel movements per 24 hours by day 4.

Hold off on pacifiers for the first 6 weeks.

If you have persistent pain, ask for help from a lactation consultant or other breastfeeding expert.
